

Esko Kongsberg ACS router bits

Enhanced Cutting Capabilities

Single-Pass Efficiency: Capable of cutting up to 10 mm clear acrylic in one pass, achieving near-polished results.

No Additional Finishing Required: Eliminates the need for a subsequent finishing or polishing pass, saving time and effort.

Advantages for End Users

Milling Polished Edge: Offers an option for a milled, polished edge that requires no further processing.

Time-Saving: Significantly reduces the finishing time by avoiding a second machine pass or manual hand finishing.

Precision and Accuracy: Unlike laser-cut edges, these bits create vertical sides for precise assembly and accurate positioning.
