FT60 60" Finishing Table

The **FT60** turns any roll laminator into a sign making, flatbed applicator for mounting or laminating rigid substrates and printed sheets by providing a faster, easier one-step roll application process. It combines a 60" W x 48" D roller ball transfer table with a backlit cutting surface, both in one space saving accessory.

Compared to expensive flatbed applicators, the FT60 delivers...

- *Lower cost*
- *Dual functionality*
- *Faster workflow*
- *Lightweight strength and durability*
- *Simple set-up/operation*
- *Comfortable 38" table height*
- *Two-sided work surface*
- *Space-saving portability*

Use one table surface as an in-feed to a roll laminator for laminating, pre-coating or mounting boards up to 5' x 10'.

Use the back side as a backlit worktable for trimming prints.

The Transfer table side features 4 rows of transfer balls for easy positioning of images and precise alignment. It includes a full-length 48" side guide and printed alignment guides for straight feeding of standard board widths. Roll the table away and you have all the advantages of a roll laminator.

The Cutting table side is LED backlit for easy alignment of graphics that need to be trimmed. The surface is thick, durable 180-gauge, 3/16" translucent Polyethylene (LDPE). Its seamless translucent white, non-glare surface can be cut with rotary cutters and utility knives repeatedly without leaving marks. This self-healing surface means more accurate cuts and less blade wear.

Folds to 90 degrees for storage

Portable and easily storable.

When you're done with your job, just fold the table 90 degrees and roll it out of the way until you need it again.

The FT60 frame, made of strong, durable, light weight aluminum, has a better strength to weight ratio than steel.

LED backlit cutting surface with self-healing mat
