

To get to the "service menu", restart the machine while holding down the FUNCTION & REMOTE buttons.

Another way is to hit the FUNCTION key while in regular mode until you see #TEST in the led screen.
hit ENTER

scroll down {with the down arrow} to "INK CARTRIDGE" hit ENTER

scroll to "CART. VALVE" hit ENTER.

You will see 8 dots that represent each valve. Using the arrow keys, select the appropriate valves, using the {UP or DOWN} arrow to open the valves one at a time. if you listen carefully you can hear a slight click as the valves open or close. When OPEN you should see a "O" in the led screen to show the valve is open.
When ALL the valves are open you can proceed with the draw down on the docked printhead.

When completed put the drain tubes back where they belong. SHUT DOWN the printed, and start as normal.
