

Simulations of PANTONE MATCHING SYSTEM® colors

This figure displays a comprehensive grid of 10,000 unique color swatches, arranged in 100 rows and 100 columns. Each swatch is a small square with a distinct color and a unique hex code. The colors are organized into a systematic sequence, starting with dark colors on the left and transitioning through various hues and saturations across the grid. The hex codes are displayed in a small font below each color swatch, providing a precise digital representation of the color. The grid is a visual representation of a large dataset of color information, useful for design, art, and digital media applications.
